

The GNOME project provides two things: the GNOME desktop, an intuitive and attractive desktop environment for corporate and home users, and the GNOME development platform, an extensive framework for building applications. Volunteers, software developers, documentation writers, artists, translators, all work together to make GNOME easy to use, accessible, powerful, innovative and just plain great. Corporations have also joined in the effort and now provide additional resources for the project as well as professional support for GNOME users and developers. Thanks to the GNOME project, hundreds of thousands of people worldwide have successfully begun using free software.
